

# CORTLAND DENTIST CELEBRATES 10TH ANNIVERSARY WITH NEW OFFICE

S

ome patients say their dental appointments are well worth a long drive. It may give them a chance to relax before and after the appointment, or a chance to see some beautiful country, but mostly - they find the destination worthwhile. Dr Clark-

Lowell's practice in Cortland, NY is one of these rare finds, a unique combination of patient education, technical/aesthetic detail, integrity, and courteous service.

Dr. Clark-Lowell was raised in upstate NY and went to Wells College. She is also a graduate of U. Conn. Dental School, which is top-ranked on national board scores, where she was awarded the accolade "Best General Dentist" by the Academy of General Dentistry, a national award. She is enthused to be back at home in Central NY. It has now been ten years since she began practicing in Cortland, and in her words, "what better way is there to celebrate than by offering our patients a new state of the art facility? Our patients are like family to us and have helped to make us successful - our staff looks forward to coming to work every day - we work as a team and we complement each other very well." Her full-time staff have all been with her for a full ten years. Dr. Clark-Lowell enjoys involvement in the local dental society and just completed her term as first female president of the CNY 6th district dental society (nine counties). She most enjoys the aesthetic/restorative aspect of her work (fillings, crowns, bridges, dentures, implant restorations). When not at the office, she enjoys time in and around the Finger Lakes with her husband and three young boys.

The practice seeks to provide comfort for patients while providing them with the best quality aesthetic dentistry available. The new facility is built around this philosophy. Her lot on Luker Rd. is surrounded by open space, has plenty of parking and a heated sidewalk, yet compensates for development with a large flood control structure and renewable building materials such as bamboo flooring. The new facility has a warm craftsman feel including a generous vaulted-ceiling waiting room featuring a children's room, fireplace, sofas and millwork all around. Handicap accessibility is stressed via an oversized treatment room with movable carts - where patients may be treated without leaving their chairs. "We are using technology to alleviate patient stress and assume the burden for medical history & HIPPA forms, as well as supplementing patient education and diagnostics. We will be offering wireless headsets with XM radio to help distract patients from the sounds of dental instruments." A new website has been released in conjunction with the move: [www.drclarklowell.com](http://www.drclarklowell.com)

*"It is a wonderful feeling to help someone smile again and restore their confidence in their appearance."*
